

Session 2 Teamwork — Saved Opportunities, Visible in the Navbar

Context

Work in your team (six teams of four students).

Right now, `savedIds` (which opportunities are saved) lives only inside `OpportunitiesSection`. The Navbar has no way to know how many opportunities are saved — and it can't, because the Navbar is not a parent, child, or any kind of descendant of `OpportunitiesSection`. They are siblings under `App`.

Goal

Show a live count of saved opportunities as a small badge next to "Opportunities" in the Navbar.

What to build

1. A new Context, `SavedOpportunitiesContext` — same Context + Provider + hook pattern as `NotificationContext` from class — whose Provider owns the `savedIds` `Set<number>` and a `toggleSaved(id)` function (move the exact logic that is currently inside `OpportunitiesSection`).
2. Wrap the app in the new Provider.
3. Update `OpportunitiesSection` to read `savedIds` / `toggleSaved` from the new Context instead of its own local state — delete the local state and function once the Context replaces them.
4. Update `Navbar` to read `savedIds` from the same Context and show a small badge with the count next to the "Opportunities" link, only when the count is greater than zero.

Rules

Allowed — everything from class today: `createContext`, a Provider component, `useContext` via a custom hook.

Not yet — Redux, `useReducer`, any Node/Express change.

Test it

- Save two or three opportunities: the Navbar shows a badge with the correct count immediately.
- Un-save one: the count updates immediately.
- Un-save all of them: the badge disappears entirely (not a badge showing "0").
- The "saved only" filter on the Opportunities panel still works exactly as before.

Done when

- ☐ `SavedOpportunitiesContext` exists and is the single source of truth for saved opportunities.

- ☐ `OpportunitiesSection` no longer owns `savedIds` as local state.
- ☐ The Navbar shows a live, correct count badge, hidden when the count is zero.
- ☐ `npm run build` and `npm run lint` (inside `client/`) both pass.
- ☐ Your team has saved/pushed your own attempt before seeing the official solution.

Working time

About 25 minutes.
